

2

A. 

3 C. The Sensitivity changes.

D. When the bias is 0 the filter is less sensitive and vice versa

E. we use edge detection $|u_2 - u_1| > 0$
then ~~no~~ no Pooling is required.
just a fully connected with $w_0 = 0$ and $w = 1$

4

B. $|\phi(u)| = \lfloor d/5 \rfloor$ or $\lfloor \frac{d + 2P - k}{5} \rfloor + 1$
